

Abdul Samad Siddiqui

Forward-Deployed AI Engineer | Full-Stack & Agentic Systems

[Email](#) • [GitHub](#) • [LinkedIn](#) • [Portfolio](#) • Karachi, Pakistan

SUMMARY

Forward-deployed AI engineer building and deploying customer-facing AI systems from ambiguous business requirements. Experienced translating operational workflows into production applications across agentic AI, full-stack SaaS, APIs, integrations and data infrastructure. Built multi-tenant platforms and client solutions using Python, TypeScript, Next.js, FastAPI and PostgreSQL, with ownership spanning discovery, architecture, implementation, deployment, debugging and stakeholder iteration.

EXPERIENCE

Forward-Deployed Full-Stack & AI Developer | Independent Contracts | Remote Nov 2025 – Present

- Partnered with a UK healthcare client to translate operational requirements into a production booking and care-management platform, owning architecture and delivery across role-based authentication, user and carer dashboards, booking workflows, location search, transactional email and PostgreSQL data design.
- Took requirements from stakeholder conversations through technical scoping, implementation, deployment, production debugging and iterative improvements based on client feedback.
- Integrated a custom lead-screening workflow into an existing GoDaddy website, automating questionnaire capture and email delivery while working within the client’s existing infrastructure.
- Documented and handed over the deployed system, repositories and operational configuration for continued client ownership.

Full-Stack AI Developer, DevoticsLabs | Onsite Jun 2025–Oct 2025

- Built full-stack application features across Next.js/React frontends, Python/FastAPI APIs, databases, authentication, and third-party integrations, contributing across both frontend and backend development.
- Integrated LLM APIs and AI-powered functionality into web applications while using AI-assisted development workflows for implementation, debugging, refactoring, and iteration.
- Worked across the application lifecycle from feature implementation and database design through deployment and production debugging.

PROJECTS

IronhausAI - AI Lead Automation SaaS SaaS

[Live](#) [NEXT.JS](#), [FASTAPI](#), [OPENAI AGENTS SDK](#), [POSTGRESQL \(NEON\)](#), [DRIZZLE ORM](#), [UPSTASH REDIS](#), [RESEND](#).

- Designed and deployed a multi-tenant AI lead-response platform around independent-gym workflows, converting website and Instagram enquiries into qualified leads, booking requests and staff handoffs.
- Integrated the product into external customer channels through an embeddable website widget, Meta webhooks and Instagram messaging while preserving tenant isolation and gym-specific knowledge.
- Built production safeguards including signature verification, encrypted OAuth credentials, rate limiting, retries, deduplication, idempotency and controlled human escalation.
- Converted recurring deployment requirements into reusable onboarding, configuration and tenant-specific knowledge systems.

LegalalyzeAI - Multi-Agent Legal Document Analyzer AI Agent

[Live](#) [Next.js](#), [TypeScript](#), [FastAPI](#), [OpenAI Agents SDK](#), [PostgreSQL](#), [Drizzle ORM](#), [Redis](#), [Better-Auth](#)

- Built a multi-agent document analysis system that routes legal documents through specialized summarization, risk-detection, and clause-analysis workflows using shared agent context.
- Designed a dual-model inference and content-addressed caching layer to reduce redundant LLM calls while supporting separate authenticated and public-demo workloads.
- Implemented concurrency-safe usage quotas with row-level database locking and transactional enforcement, preventing simultaneous requests from bypassing per-user limits.

Cognita - Agentic RAG Learning Platform AI

[Link](#) [Next.js](#), [FastAPI](#), [TypeScript](#), [OpenAI Agents SDK](#), [Qdrant](#), [Gemini Embedding](#), [NeonDB](#), [Docusaurus](#)

- Built an agentic RAG system where the LLM autonomously decides when to invoke vector search over course content instead of relying on a fixed retrieve-then-generate pipeline.
- Developed a personalization layer that adapts responses to each learner's software and hardware background using onboarding data stored in PostgreSQL and injected into the agent context.
- Shipped the complete learning platform across a Next.js/Better Auth portal, Docusaurus textbook, FastAPI AI service, and Qdrant vector-search pipeline, deployed as coordinated production services.

OPEN SOURCE

Flowise, Contributor | 6 merged PRs

- Added support for new OpenAI and Anthropic models, including GPT-5.5/5.5 Pro and Claude Opus 4.7.
- Fixed production model configuration issues across OpenAI, Mistral, Cohere, Groq, Bedrock, and Perplexity, including incorrect pricing values and model identifiers.

OpenAI Agents SDK (Python), Contributor | 2 merged PRs

- Improved developer documentation by aligning examples with the current repository structure and correcting formatting consistency across tool documentation.

EDUCATION

Virtual University of Pakistan. Sep 2026 - Present
Bachelor of Science in Computer Science Karachi, Pakistan

Jinnah Govt. College, Karachi May 2024- May 2026
Computer Science, Student Karachi, Pakistan

SKILLS

Languages: Python, TypeScript, JavaScript

AI & Agents: OpenAI Agents SDK, n8n, Claude Agent SDK, Google ADK, RAG, MCP, LLM Tool Calling, Vector Search

Frontend: Next.js, React, Tailwind CSS

Backend: FastAPI, Node.js, PostgreSQL, MongoDB

Infrastructure: Docker, AWS, Vercel, Redis, GitHub Actions

Testing: Playwright, Jest, Vitest

Certifications: Claude Academy: AI Fluency: Framework and foundations, Claude 101, Claude Code 101 - Understanding Agentic AI, Agent Academy.AI

Lanuages: English, Urdu, Hindi
